

AIR OPERATIONS PLANNING MAP SERIES  
MAP 02: Rothera to Sky Blu

Edition 3, September 2018  
Scale 1: 1 000 000, Projection: Polar Stereographic  
Vertical Datum: Mean Sea Level Spheroid: WGS84 Latitude of true scale: 71°S

- Contours (interval 1000 ft)
- Coastline
- Surveyed heights (feet)
- Lake
- Estimated spot heights (feet)
- Rock outcrop
- Highest point on map (feet)
- NOT A SAFETY ALTITUDE
- Ice shelf

Guidelines for the Operation of Aircraft near Concentrations of Birds

The map shows the location of the main breeding concentrations of penguins and petrels in Palmer Land, Southern Graham Land and Alexander Island.

Low flying and unnecessary landings increase the risk of disturbance to wildlife. Flying birds present a risk to aircraft from bird strikes. To minimise the risk to both wildlife and aircraft, follow the guidelines below as closely as your operational requirements allow:

Penguin, giant petrel and other bird colonies are not to be overflown below 2000 ft (~610 m) above ground level, except when operationally necessary.

Landings within 1 nautical mile (~1.9 km) of penguin, giant petrel or other bird colonies should be avoided wherever possible.

Never hover or make repeated passes over wildlife concentrations or fly lower than necessary.

Maintain a vertical separation distance of 2000 ft (~610 m) AGL and a horizontal separation of 1/4 nautical mile (~460 m) from the coastline wherever possible.

Cross coasts at right angles and above 2000 ft (~610 m) AGL where possible.

For further information regarding aircraft operations near concentrations of birds see the COMNAP Antarctic Flight Information Manual: [www.comnap.aq/miscpages/SitePages/AFIM.aspx](http://www.comnap.aq/miscpages/SitePages/AFIM.aspx)

Mapping and Geographic Information Centre, British Antarctic Survey 2004-2018.

Warnings:

This map is not an air navigation chart and it is not intended for in-flight navigation.

Contours and spot heights are in feet.

Spot heights do not always denote the highest point of the feature.

Contours are derived from a variety of sources of variable accuracy.

They should only be used as an indication of topographic relief.

Bird colony information is based on limited available data - absence of a bird colony symbol does not indicate absence of birds.

For information about airfields refer to the COMNAP Antarctic Flight Information Manual: [www.comnap.aq/miscpages/SitePages/AFIM.aspx](http://www.comnap.aq/miscpages/SitePages/AFIM.aspx)
